Scope of Document

This document describes the details of exposed JSON APIs released at Analytics environment that can be used for Dashboard Reporting Purpose.

General

The below APIs are built based on the PO Application Module Structure containing Ideas, Project, Resource, Cost, Portfolio, Time Sheets, Users, Groups, Standard Codes & TeamSpace related information.

There are two versions of APIs available at Analytics environment Version one & Version 2 which are Postfixed as V2.

Whereas V2 APIs contains limited set of Project Form Fields (Max 15) which can be provided by the End-User with the possibility to select the choice of fields that can be included in the V2 APIs from application UI. To improve the Performance of dashboards.

Excluding ProjectRegisterDataV2 API It includes all the Project form fields.

To Setup the V2 APIs Choice of Project form fields configuration please follow the steps mentioned below:

1. **Login** into the System.
2. Go to Application **Company Settings**.
3. Open the **Form Builder** Settings.
4. Select Form as **Project** from top **drop-down** list.
5. Open the **configuration settings** of your Project Form of required Process.
6. Go to **DASHBOARD FIELDS** Tab.
7. **Move** required fields from Available section to **Selected fields** section which you want to include in V2 APIs.
8. **Save** your changes.
9. **Publish** the Reporting APIs to reflect the changes in Version 2 APIs.

NOTE: The below used data is for demo purpose only. It has no relation with actual data of **Customer**.

ProjectRegisterDataV2

Project Register API contains the information related to Projects & Demand register as per PO application.

1. It includes Project Form Fields.
2. In this API Projects are included where associated portfolio has Scenario “current version” only.
3. Total of Cost & cost resource type elements Sum is included in Budget, Actual & EAC. Excluding the Revenue type.
4. Data of Budget, Actual & EAC is present in Project Currency, Company currency & Optional Currency Type.
5. All Project form fields should have unique names to be included in API.

TeamSpaceRegisterV2

The API contains the information related to the TeamSpace Processes which consists of Status Updates & Documents register data as per customer document Process.

Source: Application > Team Space Menu > Status Updates Register or Documents register

The screenshot displays the 'STATUS UPDATES' section of the TeamSpace Register application. At the top, there's a navigation bar with 'PROJECT' and 'STATUS UPDATES' tabs. Below this, a search bar and a 'Status Updates' dropdown are visible. The main area shows a list of status updates with columns for Code, Title, Project Name, Folder Name, File, Opening Date, Workflow Status, and Progress. The list includes entries for 'DUPARPA - dup arpa' and 'PJ-13-010 - Nuovo Modello di As'.

Code	Title	Project Name	Folder Name	File	Opening Date	Workflow Status	Progress

ProjectBasicCostAnnualPhasingV2

The API contains the information related to the Project Financials from Project Workspace “Costs Phasing” Item.

1. The Cost data is aggregated annually in the API.
2. The API includes all the Projects of Published (PB) state only. Unpublished (UP) will not be available in API.
3. Data is available in all three Currency types of Project, Company & Optional currency.
4. Data can be categorized using Input Type field filter as Entry (included Cost & Revenue elements total) & Resource (includes Resource cost total).
5. Data can also be categorized as Revenue (includes total of Revenue, Revenue resource elements) & Cost (includes total of Cost, Cost resource elements) using Element Type field filter in API.

Source: Application > Projects or Ideas Menu > Project or Ideas register > Select required Project > Project Workspace > Financials > Costs Phasing
