IPTAP Features

1. Project Creation

   => In IPTAP user can create project over all the cos node like (zone, sub zone, market, facility as well as on root node). So, no node will be lock in IPTAP.

   => We have implemented the visibility configuration to hide Breakdown control for project creation popup we can handle the visibility from form builder module.

   => Also removed the project start date and finish date control from popup and saved today date as start date and today date + 1 as finish date at backend.

2. Project Register

   => For project register removed all the cost and sap columns.

   => Also we have created configuration setting for context menu items as user want to make the visibility of context menu item as per their requirement, he can make it possible from form builder.

3. Project Detail

   => For project detail page we have create few new controls below is the list of controls
   1- Contract Duration Control
   2- SBU (same as key characteristics)
   3- Zone (same as key characteristics)
   4- Project Territorial Scope (same as key characteristics)

   => And modified the form with already existing control as per the user requirement.

4. Project Workspace

   => Project workspace will not be available from anywhere in the application like (Project title click, Project context menu, Global search, home page and my action etc.)
   => We have implemented the configuration of accessibility for workspace in form builder.

5. Collaboration

   => Collaboration menu will not be available in IPTAP

6. General

   => Delete inactive user and group
   => VA issues
